

YESation Mini Plus

Our Fourth-Generation, Thin Clients Pack HUGE Value in a Small Footprint

The YESation Mini Plus (2252) is Affirmative's newest most popular model doubling the resources of its predecessor the 2242. The all new Mini Plus provides unmatched economic value, performance and legacy compatibility in entry level thin clients which the competition no longer offers. The YESation Mini Plus is powered by an Intel-compatible AMD LX800 processor and solid state components running Microsoft Windows CE6. It is 35% smaller, 40% faster, uses 30% less power, and is 29% less expensive than other thin clients.

The YESation Mini Plus has a very small footprint (7.75 x 6 x 1.5 inches) and can be mounted vertically via optional VESA mount. The unit weighs only 1.5 pounds allowing for optimal mounting options, and low shipping costs.

The YESation Mini Plus provides ICA, RDP, Quest, and 2X clients standard and is compatible with most other VDI clients supported by Windows CE6. The YESation Mini Plus includes the Internet Explorer 6 browser locally for access to web based applications and is the perfect Internet terminal for IBM iSeries and OS/400 users. Terminal-style 122-key, 5250/PC keyboards are supported with Affirmative's keyboard drivers and map files. YESation Mini also includes VPN client, Acrobat Reader, Microsoft Office Viewers, and USB disk drive support. No network cable? Go wireless with an optional USB wireless adapter.

The YESation Mini Plus truly has the best price/performance in the industry. Backed by Affirmative's superior technical support and 26 years of thin client experience specializing in IBM AS/400 and iSeries environments, the YESation Mini Plus is a smart enterprise-wide solution.

Why Affirmative thin clients?

A thin client is a display terminal that can support local printers and other PC peripherals, such as scanners and wireless LAN adapters. Thin clients allow the user to work with Windows, web browsers, UNIX, and IBM mainframe applications without moving any files to the local desktop. This eliminates the concern for local backups and unauthorized applications. Affirmative thin client power consumption is only 10% of a typical PC reducing total electrical cost.

Thin clients are a cost effective alternative to the PCs and workstations widely deployed in business operations. They are somewhat less expensive to buy, but extremely less expensive to operate and maintain. Thin clients have no disks drives to crash, no viruses, no productivity-robbing games or movies, and no unauthorized file transfer. Since data is not stored locally, thin clients provide an ultra-secure environment if one is lost or stolen; also all YESation models can be physically secured with a Kensington lock.
